

“In addition to the groups who already use the hall, the work will make the centre more appealing to members of the wider community.”

Leanne Storr

East Side Community Centre

Project:

New water and heating system

Subject:

Facilities and building improvements

Location:

Whitby, North Yorkshire

Overview:

East Side Community Centre was awarded £4,779 to replace its heating and separate water heater system with a single energy efficient gas boiler.

The new gas boiler is more cost effective and efficient, saving the centre money and enabling it to continue to deliver its valuable services to the local community. It has allowed the centre staff to develop ‘Memory Lane lunches’ and offer a wider range of activities for people of all ages.

All those who use the community centre have reaped the benefits of the new boiler, from the elderly people who attend the lunch clubs, to those with disabilities and learning difficulties who use the centre, to children and parents who use the after school club.
